

Door Instructions

Easy-link: cut along lines to make walls inter-linkable

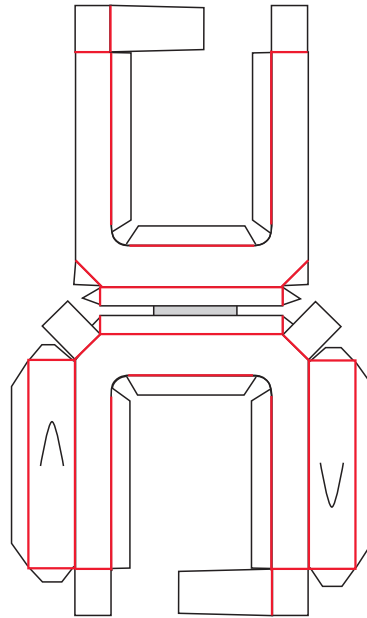

cut after model is finished and glue is dry

Note: there are other models with narrower doors where you should directly cut out the inlet!

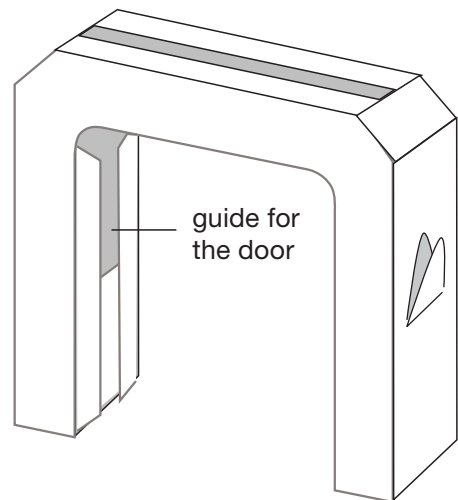

fold under door frame flaps

1. Print on 150g-200g paper, cut out preferably with a paper knife and steel ruler. Do not forget the links.

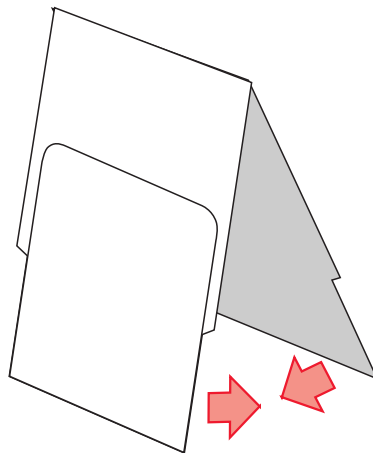

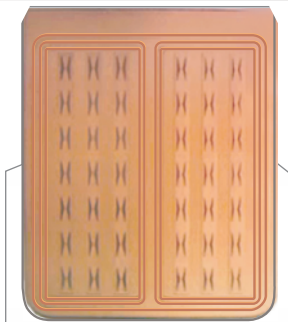

2. Trace the fold lines from the back with either a hard sharp pencil or preferably a fine ball pen. Apply a little pressure so the paper is scored. It will then fold up quite easily.

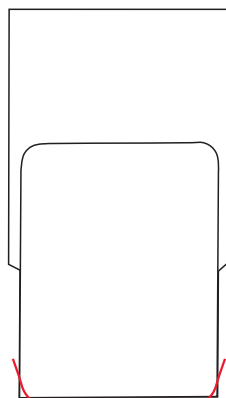

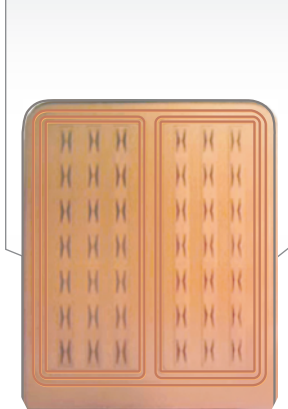

3. Fold and glue like this, then cut the remaining bridge on the top to slide in the door.

4. fold door in half and glue together

5. slightly round the bottom corners

Finally! A fully slideable door!
