

General Instructions and Annotations

1.) Print at 100% (turn off 'fit to page' or the prints may vary in size!)

2.) **Floor Tiles:** If possible, mount the floor tiles onto foam-core. This will make the layout easier. You can also use pins to fix a few corners of walls to it, to ensure nothing moves during game play.

Some floor tiles, may be larger than your printing area. If they are much larger, then two file version have been included, broken down to printable size and full.

If the tiles fit on A4 but are slightly larger than your printing area, use CENTERED printing and ignore what little of the tile may be cut off. These parts are usually hidden underneath walls!

For users from the US I recommend the use of US legal format, which is slightly larger than A4! US letter is too small!

3.) **Walls:** The walls are perfectly modular and allow in combination with corner links to create any odd shape, you might desire, very much like using building bricks. The advantage of reusable walls is the diversity. You are not bound to a single layout but can create any scene you want. (e.g. 2 doors, 4 or even 5 doors in a room are thinkable.)

The second advantage is the storage. If you glue the walls to the boards, you need a lot of space for storage. Keeping the walls modular reduces the space necessary and allows you to take just the floor boards and a few items, if you play at a friends home.

4.) **Huges:** To be huge friendly use Huge Doors, wide corridors and leave out the items.

5.) **Items:** A lot of items have been included to decorate the rooms. Some items are not really necessary for game play, but have been added for completeness.

6.) **Instructions:** Walls, Doors and Links have a separate instruction sheet in PDF format. Short instructions are included with specific items, like consoles and furniture.

7.) **Legal Note:** To ensure utmost authenticity a lot of screenshots of the original SW films have been used to create patterns. I do not claim original authorship for these parts. Star Wars and related materials are under Copyright of Lucas Film Ltd. This is a fan product for fans and may be copied for private use only. It may not be sold or commercially exploited in any way.

The Easy Link paper-link-system is my original invention and if you intend to create items using it, please contact me at Eli.Kurtz@gmx.net

That said, I can only wish you happy building
and a lot of fun with the models.

In case you take a picture of your models, I would
very much appreciate, if you could send me one.

Yours

ELI
